    AAV09252 standard; cDNA; 1725 BP.
                                                      This nucleotide sequence encoding an isoform of cytochrome P450RAI. Its expression is dependent on the presence of retinoic acid (RA). The retinoid regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 mucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and uncleotide sequences to identify drugs which are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          oxidative

The encoded protein is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in cepithelial cells exposed to retinoic acid. The clone was isolated from a retinoic acid-treated p19 teratocarcinoma cDNA library using human p450RAI cDNA (see AAV12204) as probe. Zebrafish, human can be used in the recombinant production of p450RAI proteins. Antisense nucleic acids can be used in a claimed method for can be used in the recombinant production of p450RAI proteins. Antisense nucleic acids can be used in a claimed method for cancer, inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head cand/or neck, non-small cell lung carcinomas, basal cell carcinomas, cander promyelocytic leukaemia, skin cancer, and premalignancy cancer associated with actinic keratosis, acne, psoriasis and/or the p450RAI concer as a cancer and promyelocytic cancer as a cancer as a cancer and promyelocytic cancer as a cancer as a cancer as a cancer as a cancer as a cancer as a cancer as a cancer a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-668-482-32 x AAV12205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Align seg 1/1 to: AAV12205

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     101

The encoded protein is a cretinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in cebrafish p450RAI was used to retinoic acid. To isolate the clone, cebrafish p450RAI was used to search an expressed sequence tag characteristic contents. The content of calcidated clone was used to screen a cDNA library cepnerated from an NT2 cell line treated with retinoic acid. The cand mouse p450RAI cand be combinant production of P450RAI. Antisense can be used in the recombinant production of P450RAI. Antisense concleic acids can be used in a claimed method for inhibiting cretinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or check, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis.
                                                                                                Ratio:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a human protein, designated PSEC64, which is related to neuron growth. The PSEC64 protein and its gene can be used for the development of a preventive agent for use in the treatment of diseases in which nerves are involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 2; Page 8-10; 13pp; Japanese.

                                                                                                                                   This sequence comprises a genomic clone of a novel mouse retinoid metabolising protein designated mp450RAI. A cDNA clone (see AAV12205) that includes a coding sequence for the full-length mp450RAI protein (see AAW414161) is also provided. The encoded protein is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in epithelial cells exposed to retinoic acid. Zebrafish, the man and mouse P450RAI cDNA clones (see AAV12203-05) are claimed. They can be used in the recombinant production of p450RAI. Antisense sequences can be used in a claimed method for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This nucleotide sequence encodes the cytochrome zP450RAI of the zebra fish. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify advanced to the cytochrome promoters and nucleotide sequences to identify

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1467 TTGGATTCTCTCAAACGGACCCCCGACAATGAAAACAGGCCCGACTATTT 1516
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Retinoid metabolising protein; P450RAI; retinoid oxidase; retinoic acid; zebrafish; inhibitor; antisense; cancer; actinic keratosis; oral leukoplakia; head tumour; neck tumour non-small cell lung carcinoma; basal cell carcinoma; acute promyelocytic leukaemia; skin cancer; acne; psoriasis; ichthyosis; therapy; diagnosis; screening; ss.
                                             transcripts present in first resure regenerating in the presence or absence of retinoic acid were compared using a differential display pCR technique, and an isolated clone (see AAV12213) was used to screen a D. rerio 6-18 hr embryo cDNA library. Human (see AAV12204) and mouse (see AAV12205) p450RAI clones have also been identified. The isolated clones can be used in the recombinant production of p450RAI proteins. Antisense nucleic acids can be used in a claimed method for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or ichthyosis. Promoter sequences (see AAV12206-08) are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    481
                                                                                                                                                                                                                                                                         This cDNA clone codes for a novel zebrafish retinoid metabolising protein (see AAW44159) designated zP450RAI. The encoded protein is retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring and is inducible in epithelial cells exposed to retinoic acid. To isolate the clone,

US-09-668-482-32 x AAV12214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       metabolising protein designated hp450RAI. Another genomic clone (see AAV12215) is also provided, as well as a cDNA clone (see AAV12204) Ct that includes a coding sequence for the full-length hp450RAI crotein (see AAW4160). The encoded protein is a retinoid oxidase ct that has the ability to hydroxylate retinoic acid at the 4 position cof the beta-lonone ring and is inducible in epithelial cells exposed to retinoic acid. The hp450RAI gene has been localised to captain a caid. The hp450RAI gene has been localised to composed to retinoic acid. The hp450RAI gene has been localised to composed to retinoic acid. They can be used in the recombinant composed to production of p450RAI. Antisense nucleic acids can be used in a colaimed method for inhibiting retinoic acid hydroxylation for the treatment of cancer, actinic keratosis, oral leukoplakia, secondary composed cell carcinomas, acute promyelocytic leukaemia, skin cancer, cand premalignancy associated with actinic keratosis, acne, generals and/or ichthyosis. Promoter sequences (see AAV12206-08)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          documentation_block:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              480 alTyrPro 482
                      p450-type hydroxylase. The hydroxylase can be used to identify brassinosteroids or brassinosteroid inhibitors, useful to produce plants with modified physiological and/or phenotypic characteristics. The modified plants may show, e.g. stimulation of growth, increased cell elongation, increased wood production, accelerated seed germination at low temperatures, an increase in accelerated seed germination at low temperatures, an increase in dry weight, repressed anthocyanin production during growth in light and/or inhibited de-etiolation which is induced, e.g. by cytokinin, in the dark or an increase in stress tolerance. The hydroxylase or its coding sequence can also be used for the recombinant production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytochrome P450-type hydroxylase; identification; brassinosteroid; brassinosteroid inhibitor; modified plant; recombinant production;
